### **DETAILED ACTION**

1. Claims 71, 73-77 and 101-110 are allowed. Claims 71, 73-77 and 101-110 are re-numbered as claims 1-16.

### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance:

The closest prior art of record (Juitt) discloses a method for managing data in wireless network by utilizing a gateway server acting as a switch that directs traffic between access points and authentication server. However, the prior art of record individually or in combination does not explicitly disclose the switch comprises a switch table containing a list of allowed addresses; wherein the switch is configured to be the authenticator for the access point and is configured to authenticate the access point with the authentication server and establish a secure communication session with the access point; wherein the access point is configured to be the authenticator for wireless client by communicating with authentication server using the secure communication established with the switch; wherein the access point is configured to send a message to the switch via the secure communication session indicating that the client is authenticated; wherein the switch adds an address for the wireless client in response to receiving the message from access point; and wherein the switch is configured to forward all communications received from the wireless client via the access point onto the network after adding the address for the wireless client into the switch table in light of other features disclosed in independent claims 71, 102 and 107.
